

## 111 West 57th's alluring bronze and terracotta facade is being installed

*The skinny supertall will bring 60 condos to Midtown*

Recent construction site photos by [NyConstructionPhoto](#) are giving us the first real glimpse at planned Midtown supertall, 111 West 57th Street's alluring bronze and terracotta facade.

We first got a look at these panels [this past August](#) when they arrived on site. Only a few panels had been installed at that time, but now a much larger portion of the building is clad in the facade.

The architecture firm on the project, SHoP Architects, [wanted to](#) "bring back the quality, materiality and proportions of historic NYC towers," in their design. These particular materials will take up the east and west facades of the building, and a glass curtain wall will run up along the north, offering views of Central Park.

Having put [most of its troubles behind](#), the JDS and Property Markets Group-developed tower has been [steadily making progress](#) over the last few months. Early in August, the skinny supertall's first condos quietly entered into contract. The 1,428-foot tower will have just 60 condos, and the developers are looking for a \$1.45 billion sellout. Construction is expected to wrap up sometime in 2019.
